

GREENHAM

Concrete Test Cube Mould User Guide

1. Brush the inside of the mould thoroughly but sparingly with releasing oil
2. Fill the cube with the concrete mix to be tested
3. Ram home the concrete using a rammer approved for the test mould and repeat until completely filled
4. Leave for the number of days required by the specific test method.
5. Undo carriage bolts to release side plates
6. Remove concrete cube and transport to Test facility
7. Clean & Rinse used mould carefully, ensuring no concrete deposits on inner surfaces
8. Lift Side plates into vertical position, secure loosely with carriage bolts and lightly lubricate to prevent corrosion
9. Store in safe position until next requirement for use
