

protecting everyone

Single solutions that clean + sanitise, hands + surfaces for effective infection prevention.

Pal Clean + Protect enables you to take control of your hand and surface sanitisation, wherever you are, whenever you feel the need. Safe, proven, intuitive solutions that naturally integrate in to the work day.

# hands - tools + surface extra power scrub

## Our toughest wipes yet

Hands, tools + surface, extra power scrub wipes supercharge your cleaning power with dual textured wipe technology. These wipes easily remove the most challenging dirt from hands, tools and surfaces thanks to a textured side that makes easy work of the worst grease and grime and a softer side that gently wipes up spills.

Ultra-low linting, extra-large and with additional infection prevention properties, these wipes are effective against coronaviruses, common flus and colds, bringing you the multi-tasking, portable solutions you need.

## EXTRA POWER SCRUB

simple to use - proven effective - always in arm's reach

## Independent reassurance

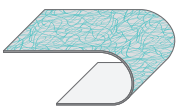

With over 50 years experience working in infection prevention, independent efficacy testing means everything to us. Pal Clean + Protect hands, tools + surface, extra power scrub wipes are proven effective by the following independent verification:

EN 1500	effective on hands	EN 1276	bactericidal
EN 13697	effective on surface	EN 1650	yeastocidal and fungicidal
EN 14476	virucidal <sup>1</sup>		

<sup>1</sup> limited spectrum; effective against coronaviruses, norovirus, common colds and flu viruses

## Dual textured and tough

Based on our strong, ultra-low linting and distinctive Tritex® Tough Professional substrate, these extra-large wipes boost your cleaning power with a dual textured substrate.

### Dual sided technology

Thicker than our standard wipes, Tritex® Tough Professional extra power scrub not only offers rough and smooth sides, but also maintains high tear resistance in all planes, providing robust in-use reliability.

### Ultra low linting

Tritex® Tough Professional's manufacturing process means there is a very low risk of fibres coming loose to contaminate sensitive surfaces or machinery.

### High solution retention

Even wetness throughout the wipe gives more consistent efficacy in use and means no pooling in the pack.

### Easy solution release

Active disinfecting ingredients are transferred to the surface when the wipe is in use. They do not cling to the wipe's fibres as with other wipes, increasing reliability and disinfection efficacy.
